

London Dungeon Hire THE HUMBLER

Put a male slave on his knees & keep him there

First, place your submissive on its knees or bent over something as I have done with this slave here.

Pull its balls back between its legs.

Position the top of the scrotal sack in the indentation in the bottom section of the humbler. Hold in place while you position the top section.

Holding the two sections in place, and being careful (perhaps) not to pinch the scrotal sack, insert the first bolt and tighten.

Make sure the scrotal sack is within the indentations, then insert the second bolt and tighten.

When in place, The Humbler prevents the submissive from standing full upright. Its balls are in a very vulnerable position, and its backside is nicely presented for spanking and punishment.

The Humbler comes in 2 styles: one for tight, close hanging balls and one for the low-hangers.

This device can have a very pleasing effect on the subject's attitude and posture.
